

## **IN THE CLAIMS:**

Please amend the claims as follows:

1. (Currently Amended) A ~~kind of~~ detonation production toy device, ~~its character is that it includes~~ comprising:

a gun body 1,

a power switch 2 mounted in the gun body,

a roll of rubber film 3 located in the gun body,

a trigger mechanism 4 mounted on the gun body,

an air pump 5 slidably mounted in the gun body,

a reposition spring 6 mounted in the gun body and engaging the air pump for returning the air pump to an original position after firing,

a seal body 7 communicating in the air pump,

a gunpoint 8 of the gun body,

a rolling mechanism 9 in the gun body for moving a portion of the roll of rubber film from a supply roll to a take-up roll in the gun body and for positioning the portion of the roll of rubber film between said seal body and said gunpoint so that air pressure generated by the air pump and passed through the seal body

engages the portion of the roll of rubber film and forces the portion to expand out through the gunpoint until the portion bursts and makes a loud noise,

a power source located in the gun body, the power source being activated by rearward movement of the trigger to engage the power switch to activate the air pump and a cam part of the trigger pushes the air pump and seal body towards the gunpoint until the air pump discharges air through an air hole in a middle of the seal body, and after discharge of the air and release of the trigger to release the power switch, the reposition spring forces the air pump rearwardly and a now detonated portion of the rubber film is wound onto the rolling mechanism in the body.
